

EarthWalk HE-PD Charging System

Pre-wired integrated USBC-PD

EarthWalk's high-efficiency (HE-PD), USBC-PD charging system provides simultaneous charging power to most USBC devices. Features adapter-free, USBC charging connections in the front of the cart or station, with cable management in back. Simultaneous battery charging provides lower energy costs and balanced charging to all devices. Pre-wired and ready to deploy means none of the wiring headaches for you.

HIGHLIGHTS

- Charges just about any USBC device—allows different brands and models of devices to be used in the same cart or station
- Plug-n-play: No set up required
- Integrated USBC-PD central power supply and distribution system with intelligent power allocation
- Certified USBC to USBC charging cables with E-chip
- Hot-plug, auto-sense detection—5v | 9v | 12v | 15v | 20v
- HEPD Intelli-charge system reduces heat during charging and increases lifespan of batteries
- FCC/CE/UL rated electrical power system
- Simultaneous charging of all devices
- No AC adapters, timers or switches needed

Auto-sensing, multi-port USBC-PD technology determines voltage needed by each device and helps reduce heat during charging—increasing the lifespan of the device batteries.
